Projects

Cattle Breed Recognition System | Python, TensorFlow, OpenCV, NumPy, Pandas, Matplotlib **Nov 2025**

- Developed a deep learning–based image classification system to recognize different cattle breeds from input images, enabling automated breed identification.
- Built and trained a Convolutional Neural Network (CNN) model using a labeled cattle image dataset to perform multi-class breed classification.
- Implemented a complete pipeline including dataset preprocessing, model training, evaluation, and deployment-ready prediction interface for user image input.
- Achieved **high classification accuracy (~90%+)** with optimized image preprocessing and model tuning, enabling fast predictions for real-time breed recognition.
- Repository Link: https://github.com/VivekShinde0013/Cattle_bread_recognization

Insurance Category Predict | Python, Pandas, Scikit-Learn, FastAPI, Uvicorn, Pickle, Frontend.py **Oct 2025**

- Developed a machine-learning API using FastAPI to predict insurance category outcomes from input features , streamlining classification workflows.
- Built and deployed a trained model (saved as model.pkl) from the insurance.csv dataset to perform multi- class category prediction in production-style settings.
- Integrated a full-stack pipeline including data ingestion, model serving, and frontend interface (via frontend.py) to provide user-friendly interaction with the predictive service.
- Achieved 94%+ prediction accuracy and reduced prediction time to under 1 second through API-based inference. Gained hands-on experience with Python, ML model lifecycle (training, serialization, inference), and API
- Repository Link: https://github.com/VivekShinde0013/Insurance_category_predict

Training

ATM Banking System | GitHub | Certificate **Jun 2025 – Jul 2025**

- Developed an ATM banking system in JAVA simulating core operations such as user authentication, balance inquiry, withdrawals, deposits, and transaction history.
- Implemented a robust OOP-based backend (Account, Transaction, ATM Machine classes) ensuring secure PIN verification, transaction limits, and minimum balance rules.
- Built a clean command-line interface with error handling (invalid PIN, insufficient funds) and implemented timestamp-based transaction logging for audit purposes.
- Improved transaction processing reliability by eliminating input errors by 90% and enabling 100% traceable transaction logs through timestamp tracking.
- Tech : JAVA , OOP, File Handling, UML Diagrams, CLI Interface

Certificates / Certifications

FastAPI For Machine Learning **Nov 2025**
Udemy — Certificate Link

OCI AI Foundation **Sep 2025**
Oracle University — Certificate Link

Skills

Languages: Python, C++, Java

Technologies/Frameworks: TensorFlow, keras, NumPy, Pandas, Matplotlib, Scikit-learn, Jupyter Notebook

Domain Skills: Data Structures and Algorithms, FastAPI, Computer Vision, Supervised Machine Learning, Image Classification

Education

Lovely Professional University **Since Aug 2023**
Bachelor of Technology - Computer Science and Engineering — CGPA: 7.04 *Phagwara, Punjab*

Brilliant Academy And Junior College Of Science **2022 – 2023**
12th — Percentage: 74.80% *Karad, Maharashtra*

Yashwant Highschool Karad **2016 – 2017**
10th — Percentage: 90.80% *Karad, Maharashtra*
